is here.

language

VOLCAN K105 | L80

The future
is here

Volcan K105 and L80 are specialised tractors matching most advanced 'made in BCS' technology and top production efficiency, along with environmental care.

The electronically-operated Stage IIIB 98 and 75 HP engines comply with the strictest European standards as for emission control: **a supremacy among isodiametric tractors translating into lower consumption, less toxic emissions and higher operating comfort.**

Innovative technical content, elegant design and reduced overall dimensions make **Volcan K105 and L80 indispensable machines for future agriculture.**

Engine

Clean power

Volcan K105 tractors come with a 3.8 lt Kubota engine which develops 98 HP. Devices such as EGR (the exhaust gas recirculation system), the DOC (diesel oxidation catalyst) and the DPF (diesel particulate filter) dramatically reduce toxic substances emitted into the environment.

Volcan L80 tractors have a 2.4 lt Kohler engine which develops 75 HP. Turbocharged by a Turbo Intercooler, it is equipped with an EGR system alongside a DOC catalyst to reduce emissions and enhance operational efficiency.

Both latest generation Common Rail engines ensure **a precise injection control, and therefore a more efficient combustion, improved performance and less fuel consumption.**

Counter-rotating shafts of the engines reduce vibrations to the advantage of the heard noise and the higher operating comfort.

Electronic management

The electronically-managed engines have an electronic control unit that **ensures a correct operation of the power unit and sets the revolution number, keeping it constant.**

The engine rpm electronic management has been entirely developed by BCS Group; it is fast and precise, through the dashboard located at the right of the steering wheel and operates: speed increase and decrease, set speed setting and recalling, electronic governor switching off and shifting to idle speed.

ADVANTAGES

A correct setting of the speed while working means:

- steady tractor inching speed
- steady PTO revolutions
- steady hydraulic flow

and, what is more, the set speed can be recalled by simply pressing one button, thus improving work efficiency and saving time and fuel.

TECHNICAL SPECIFICATIONS	VOLCAN K105	VOLCAN L80
Model	Kubota V3800 CR-TE4	Kohler KDI 2504 TCR
Emission level	Stage IIIB	Stage IIIB
No. of cylinders	4	4
Intake	Turbo	Turbo Intercooler
Displacement	3769 cc	2482 cc
Injection	Direct Common Rail	Direct Common Rail
Power kW/HP	72.1 / 98	55.4 / 75.3
Rated speed	2400 rpm	2300 rpm
Maximum torque	330 Nm @1500 rpm	300 Nm @1500 rpm
Cooling	Liquid	Liquid
Balancing	Counter-rotating shafts	Counter-rotating shafts

Transmission

OS-Frame

The transmission of the Volcan K105 and L80 features the exclusive OS-Frame, with many advantages.

ADVANTAGES

- Engine and clutch are reciprocally connected by a single transmission shaft that transmits movement to both transmission and independent PTO, through a single central cardan joint, guaranteeing **top mechanical performance, compact dimensions and larger steering angles**, indispensable while working in narrow areas.
- The coupling of engine and OS-Frame is made by an high inertia flywheel which **reduces vibrations to the advantage of performance and higher operator's comfort**, along with the 'Long Travel' torsional damper.
- A joint located in the center section of the tractor makes the front axle swing up to 15° with respect to the rear axle, stabilising geometry on gradients or rough grounds and guaranteeing **maximum traction of the four wheels, with full grip on the ground**.

Synchronised gearbox

The synchronised gearbox is formed by **4 ranges and 4 speeds, for a total of 16 ratios both in forward and reverse, with synchronised reverser**.

The logic sequence of speeds (from 700 m/h to 40 km/h) - without any overlapping for all ranges - allows you to select the best gear for the required use, making the tractor's use more rational with: fuel saving, reduced stress on mechanical components, reduced engine strain and above all improved quality of work.

Pro-Act System

The clutch engaging pedal comes with the Pro-Act System, a system for a more comfortable and ergonomic movement of the foot on the pedal. The operator feels modulation more precisely.

Long life clutch

The clutch is **multiple disc in oil bath type; its hydraulic control is proportional and electronically managed**. It modules engagement and releases in a punctual way and the clutch results softer and more performing than traditional dry clutches.

The clutch is hydraulically controlled by a proportional solenoid valve connected to an electronic control unit; the latter reads the pedal position through a potentiometer and guarantees an improved progressiveness so that the operator can control the tractor more and more precisely.

Volcan K105 and L80 tractors use this type of **evolved hydraulic clutch placed inside the transmission, to reduce engine projection and the tractor's length**. A technological choice bringing about concrete advantages.

ADVANTAGES

- Longer life;
- No maintenance;
- Top manoeuvrability thanks to the reduced overall dimensions.

Electrohydraulic reverser

Volcan K105 and L80 transmission can be equipped with the **exclusive electronically-operated reverser, with EasyDrive® electronic handling**.

The comfortable reverser lever on the left of the steering wheel allows the operator to **reverse the driving direction without lifting his hands from the steering wheel and without using the clutch pedal**, while keeping the vehicle control at any time and working comfortably.

This exclusive system is based on an **electronic control unit**, fully developed and produced by the BCS Group, that can calculate in real time parameters such as sloping, acceleration and load. When the reverser is operated, the

control unit decreases the machine speed by means of the service brakes, depending on the speed and the engaged ratio, and automatically engages the reverse gear, releasing the clutch progressively. This reduces manoeuvring times and increases operating safety.

For the best feeling between you and your tractor, **the operator can modify the system reactivity in 5 different levels**, visible on the color display of the dashboard (from the sweetest to the most reactive one), depending on the different working needs, through the two buttons located close to the lever.

The EasyDrive® electrohydraulically-operated reverser is especially **handy and easy to use for all those works requiring many direction changes**, such as greenery maintenance, material handling with fork lift, snow moving works or for movements at the headland in vineyards and orchards.

Agility

Steering

All specialised tractors must be handy to manage so that they can be operated in very narrow areas.

Volcan K105 and L80 tractors have a matchless manoeuvring capacity, thanks to their short wheelbase and their compact dimensions.

The steering wheel is power assisted, through a dedicated hydraulic system. The manoeuvres are precise and the turning radiuses are very small both in models with steering wheels and in those with central articulation, and especially in Dualsteer® versions.

Dualsteer®

Dualsteer® is internationally patented and is unique on the market: it is a **double steering system joining the central joint of the frame to the steering of front wheels**, the steering angle can reach 70°.

The two hydraulic cylinders in the central joint increase both the power of steering, with high precision at extremely low speeds, and directionality and stability during road transport at high speed.

ADVANTAGES

- Safety and stability typical of steering wheel version;
- Performance while steering and manoeuvring easiness typical of version with central joint;
- Performing on any ground, even with high gradient;
- These machines are indispensable for works in narrow vineyards, in greenhouses, gardening and greenery maintenance.

Top efficiency

Hydraulic system

The hydraulic system has **two circuits with independent pumps and heat exchanger** for oil cooling.

The pump for the power steering and electrohydraulic controls has a flow rate of 33 l/min, while that for lifts and remote control valves a flow rate of 30 l/min. An oversized system is available as optional, with lift pump with flow rate of 49 l/min.

Joystick

The new electronically-operated multifunction joystick (available as an optional) **allows the hydraulic system and the lifts to be controlled at the same time through a single device**; in this way, all operations involving the tractor hydraulic system can be performed safely and easily.

A numbered knob integrated in the armrest can be used to adjust the system sensitiveness.

PTO and lifts

The rear PTO, with multiple-disc clutch in oil bath is **independent from the transmission and is synchronised with all progress speeds**. It can be engaged also while driving through an electrohydraulically-operated control located on the dashboard (equipped with safety system for involuntary operation); the speed is 540/540E rpm or, as an optional, 540/1000 rpm.

The **sturdy rear lift** has multipurpose fittings category 1 and 2 to fit simply and quickly all attachments available on the market. The high lifting capacity of 2300 kg increases to 2700 kg for SDT differentiated wheels versions.

Optional equipment include a rod and a hydraulic tie rod for adjusting the implement directly from the driver's seat, as well as a **performing front lift**, with hydraulic outlets, indispensable when using combined implements.

Active and passive safety

Operating safety

The use in full safety, on high gradients and crosswise, is guaranteed by the **project geometry of Volcan K105 and L80 tractors, featured by a low centre of gravity and the very good balancing of weights on the axles** (50% at the front - 50% at the back), with implement coupled to the rear lift.

The operator's seat with approved roll-bar or cab, the safety belt secured to the seat and the quality of the materials used guarantee top protection for the operator in each and every condition.

The differential lock, simultaneous front and rear or rear only, is electrohydraulically operated and the tractor can be in traction all the time.

The disengagement of front drive, through an electrohydraulic control, improves road transfers and protects especially delicate grounds.

Braking system

The braking system is formed by four disc brakes in oil bath intervening simultaneously and continuously on all four wheels, even when the front drive is released, as they are supported by a hydrostatic control acting as braking divider.

The **independent Brake-off parking brake** is exclusive to Volcan range: **it automatically engages when the engine is switched off**. When the tractor is moving an electrohydraulically-operated handy button on the dashboard is used to engage it.

Driving position

Absolute comfort

The pleasure of working with a Volcan K105 or with a Volcan L80 tractor results not only from the machine's performance, but also the comfort that it reserves for the driver. The **driving platform is hanging on silent-blocks to dampen vibrations and noise** to the advantage of operating comfort.

The controls are ergonomically located and easy to be operated; when seated, the operator has a complete, unobstructed view on the machine and on the implement.

The steering wheel has a new shape and it can be gripped more easily; its tilting can be adjusted for the best adjustment according to the build of the driver and for an easier access to the same platform.

Reversibility

The multipurpose function of Volcan K105 and L80 tractors is enhanced by the reversibility of the driving seat (not available in SDT versions).

Just in a few seconds the operator can rotate the driving platform by 180° (seat, steering wheel, dashboard and pedals), to **work with a front-mounted implement and steadily supervising all working operations**, favouring comfort and safety.

Approved cabs

Comfort cab

Comfort cab creates a **good living environment in the compartment** and was designed with a streamlined silhouette to **protect the greenery rich in vegetation** the tractor is working in.

Interiors are refined and the platform is hanging on silent-blocks; it's completely independent from the tractor chassis. The cab has large windows, glass doors and sunroof giving the driver an excellent view of the equipment and road even when the driving platform is in reverse position.

Equipped with air conditioning and heating, the cab is also available with a 4-upright **conical structure** designed for use in narrow rows on steep slopes.

The four spotlights, two adjustable rear lights and two front lights built-into the roof, together with the tractor's optical units, light up the work area for safe and precise operation even at night or with low visibility conditions.

AIRTECH Compact Cab

For SDT differentiated wheel versions the new **AIRTECH Compact** cab is available, **pressurised and approved for Category 4**, insulating operator from toxic inhalation of dust, aerosol and vapours during phytosanitary treatments, for a healthy and safe working environment. The two large active carbon filters are installed at the front of the cab and are easy to replace.

An LCD display on the dashboard, well visible for the driver, allows to control the internal pressure of the cab as well as to view the indoor/outdoor temperature and ventilation speed.

The AIRTECH Compact cab **comes with a host of comforts, as standard:** air conditioning and heating, fabric seat, internal lighting, cup holder and two auxiliary sockets to charge electronic devices or to power supplementary equipment, joystick or monitor.

The ventilation system is automotive design, with **air vents in front of the operator** to guarantee ideal temperature and to direct the air flow.

The **low-profile single-body chassis**, completely independent from the tractor, is mounted on silent blocks to reduce vibrations and noise, combined with the sound-absorbing cladding materials.

The **low height off the ground** makes use under the foliage, in pergola vineyards, canopy plantations and greenhouses extremely easy.

Functional design

Overstructures

Volcan K105 and L80 tractors feature an **aggressive look, at the same time elegant and functional**, with a muscular line that guarantees at the same time the best visibility for the operator, all this thanks to the introduction of new technological solutions and of the new power units.

In addition to the four front light clusters on front fenders, two LED beams above the hood grill increase the lighted area favouring over-night work or in case of poor visibility.

Maintenance and inspection operations of the engine compartment are quick and handy, thanks to the large opening angle of the bonnet.

All under control

The new, automotive-inspired dashboard is a concentrate of digital technology. The **multifunction colour display** continuously keeps under control - with top precision - any value of the machine and all diagnostic warning indicators of the tractor, in addition to the electrohydraulically-operated logically placed and easy traceable controls.

Analogue warning indicators are available for a quick and immediate read-out of the values, thanks to their dials.

The most complete range

To blaze a new trail, you need courage and vision, as well as experience and expertise. All these competences have always been belonging to BCS and now they are revolutionarily applied to the Volcan K105 and L80 tractors range.

Eleven different versions of tractors, each one developed for the special requirements we are stimulated to satisfy by our customers, one day after the other.

Volcan K105 | L80 AR

Reversible isodiametric tractors, with central articulation: the reference version for specialised agriculture and for city works thanks to their narrow track and reduced steering radius.

Volcan K105 | L80 RS

Reversible isodiametric tractors, with steering wheels: they are the conventional version and the one that mostly fits to multifunction works, on gradients as well, thanks to its high stability and grip.

Volcan K105 | L80 DUALSTEER®

Reversible isodiametric tractors, with double steering system, getting a steering angle of 70°, the best one for its category, for an agile and quick movement in narrow areas.

Volcan K105 MT

Reversible isodiametric tractors, with steering wheels: they are dedicated to forage harvesting, even uphill, thanks to their low centre of gravity and to the enlarged driving place.

Volcan K105 | L80 SDT RS

Tractors with short wheelbase and differentiated wheels, monodirectional: they are specially recommended both for specialised agriculture in vineyards, orchards and greenhouses and for typical works of conventional tractors.

Volcan K105 | L80 SDT DUALSTEER®

Tractors with short wheelbase and differentiated wheels, monodirectional, with double steering system: they are ideal for working on rows of crops both downhill and on side slopes.

TECHNICAL FEATURES	Volcan K105 DUALSTEER®		Volcan L80 DUALSTEER®
ENGINE	Kubota V3800 CR-TE4		Kohler KDI 2504 TCR
Number of cylinders	4 in-line		4 in-line / 16 valves
Displacement (cm³)	3,769		2,482
Intake	Turbo		Turbo / Intercooler
Fuel system	Direct injection "Common rail"		Direct injection "Common rail" - 2000 bar
Emission level	Stage 3B		Stage 3B
Balancing	Counter-balance shafts		Counter-balance shafts
Power (kW/HP)	72.1 / 98		55.4 / 75.3
Rated speed (rpm)	2,400		2,300
Maximum torque (Nm/rpm)	330 / 1,500		300 / 1,500
Speed management	Electronically regulated with a console with functions: increase and decrease of engine speed, memorize and recall a particular speed or switch off the electronic throttle and go to the minimum idle speed		
Cooling	Liquid		
Tank capacity (lt)	54		
CHASSIS	Swinging integral chassis OS-FRAME with central articulation and steering wheels		
DRIVE	Four-wheel drive. Front-wheel drive disengagement with electro-hydraulic control		
TRANSMISSION	32 speeds synchronized gearbox: 16 FWD and 16 REV with synchronized reverser		
POWER SHUTTLE EASYDRIVE® (optional)	Electro-hydraulic power shuttle electronically actuated with the lever (with 3 position FWD-N-REV) installed on the left of steering wheel. Possibility to choose from 5 levels of reactivity		
Transmission clutch	Multidisc in oil bath electronically-managed and proportional hydraulic control with PRO-ACT System		
DIFFERENTIAL	Front and rear. Differential lock: front and rear simultaneously or only rear with electro-hydraulic control		
AXLES	Front and rear with epicyclic reduction units. Front axle, oscillating in the middle (approx. ±15°)		
REAR PTO	Independent from the gearbox and synchronized with forwarding speed. Engageable under load with brake in disengaged position		
PTO clutch	Multidisc in oil bath with electro-hydraulic control		
PTO rotation speed (rpm)	Standard: 540/540E - Optional: 540/1,000		
HYDRAULIC SYSTEM	Double circuit with independent pumps and heat exchanger		
Flow rate to the hydroguide and the electro-hydraulic controls (lt/min)	33		
Flow rate to the lift and the control valves (lt/min)	30 (optional oversized pump with flow rate 49 lt/min)		
Maximum hydraulic pressure (bar)	180		
REAR CONTROL VALVES	Mechanical control		
Standard	2 double acting		
Optional and in addition to the standard ones	1 single acting and 1 double acting or 1 double acting and 1 double acting with float		
Joystick (optional)	With proportional electronic control of lifts and control valves consisting of: 1 single acting with adjustable flow and free return, 5 double acting (replacing the standard ones) and oversized pump 49 lt/min. Potentiometer to change the sensibility of the joystick		
ELECTRIC SYSTEM	Battery 100 Ah / 12 V - Alternator 95 A		
Rear power outlets	7 pin and 3 pin		
REAR LIFT	Standard: by two external rams - Optional: position and draft control		
Three-point hitches	Standard: standard couplers cat. 1 and 2. Optional: quick couplings cat. 1 and 2, arms with adjustable length or quick couplings, L-shaped, cat. 1 and 2, arms with adjustable length and hooks with adjustable width		
Three-point tie bar	Standard: with manual adjustment - Optional: hydraulically controlled upper link and tie rod link arm		
Ball joint lifting capacity (kg)	2,300		
FRONT LIFT (optional)	By two external rams with front protection and 2 double acting control valves with free return		
Three-point hitches	Rigid with quick couplings cat. 1		
Lifting capacity (kg)	800		
DRIVING PLATFORM	Reversible with platform suspended on silent block. Suspended pedals mounted on rotating control column		
Steering wheel	With adjustable inclination		
Seat	With gas spring for easy tipping, safety belt and 'man on board sensor'. Standard: comfortable sprung seat, adjustable according to the driver's weight - Optional: 'Kab Seating' or 'Grammer' pneumatic seat		
SERVICE BRAKES	Oil bath discs with hydrostatic control, acting on the four wheels with automatic engagement of the 4-wheel drive		
Parking brake	Automatic and independent Brake-Off acting as emergency brake with proportional action		
STEERING	Double steering system DUALSTEER® with 4-cylinders. Hydrostatic steering acting on front wheels and central articulation. Flow deviator for steering unit		
SAFETY	Standard: front homologated roll-bar, with gas springs for an easy lowering and lifting		
CABIN (optional)	Homologated and sound-proof with monocoque body fitted on silent-block, beacon lamp and fabric covered seat. With ventilation, heating system and air conditioning. Available with standard or conical structure		
INSTRUMENT PANEL	With multi-function colour and digital display complete with: hour counter, battery voltage, fuel consumption, DPF level, simultaneous reading of engine speed, forwarding speed and PTO speed. Warning lights and acoustic alarm	With multi-function colour and digital display complete with: hour counter, battery voltage, fuel consumption, simultaneous reading of engine speed, forwarding speed and PTO speed. Warning lights and acoustic alarm	
TYRES (standard)	280/70R18
